Digital identity solutions ready for ECM applications: Long-term archiving and form signing according to international standards

Moving closer to users: TC TrustCenter and OPENLiMiT confirm new cooperation

Hamburg, 30. October 2008 – In order to facilitate the usage of digital signatures within business processes, TC TrustCenter will have a close collaboration with OPENLiMiT, the expert for signature software. Within the scope of the new cooperation OPENLiMiT complements the digital identity solutions of TC TrustCenter with its signature software OPENLiMiT CC Sign that already features a variety of integrations in third-party products. The close collaboration between the two companies leads to a very attractive signature solution. Therefore certificates from TC TrustCenter can be easily and quickly integrated in a variety of Enterprise Content Management (ECM) systems in order to ensure manipulation and revision security in the future.

“The cooperation with OPENLiMiT follows our strategy to support the application of certificates and electronic signatures in different and new fields of applications and make it competitive,” explains Stephanie Willemsen, Director Partner Management & Marketing at TC TrustCenter. “Especially in the field of ECM many interesting fields of applications for our digital identity solutions arise and now in combination with the OPENLiMiT Software we can systematically face these challenges.”

“We are very curious about the new possibilities emerging from the partnership between our companies. Due to our EAL4+ Certification we also fulfill international regulation requirements and together with TC TrustCenter, as internationally well positioned partner, we can strengthen the marketing of our jointly developed solutions far beyond already established fields,” says Reinhard Stüber, Senior Vice President Business Development at OPENLiMiT

TC TrustCenter has successfully participated in international projects for many years, due to the world-wide divulgence of its root certificates, international accreditations and the presence of its American holding company ChosenSecurity. Both partners are involved in building a bridge between international standards and national formalities and verifying their solutions appropriately. The signature technologies developed by OPENLiMiT are verified for security, signature law as well as trade and tax law and confirmed according to international and national standards. The new OPENLiMiT Software was developed in compliance with the guidelines of the German Physikalisch-Technische Bundesanstalt (PTB) and meets international principles of data management.

Therefore the TC TrustCenter solutions integrated with OPENLiMiT can not only be used for in-house ECM applications but also for trade-specific procedures regulated by law, e.g. the electronic waste management system (eANV).

About TC TrustCenter

For more than 10 years TC TrustCenter has been the partner for the financial sector and the industry with its solutions for authentication, verification and encryption. As one of the first Trustcenters we provide world wide trust to the internet and electronic B2B Business with our Managed Services.
