Rising demand for security solutions and services: ChosenSecurity offers UK-based companies proven identity verification and security services

~ Office opens in London to provide local support ~

Needham, Mass. / London, March 6th, 2007 – ChosenSecurity, Inc., a leading US specialist in identity verification and security services, today announced that it has opened its first UK-based subsidiary in London. With its new office, ChosenSecurity plans to address the rising demand and inquiries for security solutions and services in this market.

ChosenSecurity will use the London hub to sell German IT security specialist TC TrustCenter's proven certification products and services to customers in the UK. Built since the company's launch in 1997, TC TrustCenter's portfolio includes high-qualitative web security services for the protection of e-commerce transactions, managed security services and complex PKI solutions including comprehensive consulting services. One of ChosenSecurity's customers in the UK is the Halifax Bank of Scotland. In addition, Chosen Security with its TC TrustCenter products also provides services to other global organisations such as: BMW, Steag, German Postbank, Siemens and BMG Group.

ChosenSecurity's PKI solution, 'TC Enterprise ID', offers organisations digital signatures, encryption and authentication in one suite. The PKI technology helps businesses to create and issue digital certificates using the most advanced smart card management tools available today.

Many companies that manage their own PKI with their own Certification Authority

(CA) may face the problem that browsers will not categorise their CA certificate as trustworthy. With ChosenSecurity's TC RootSigning solution, companies can get their CA certificate signed by an accredited and accepted certification authority. As a result, all certificates issued with the company's CA certificate are automatically classed as credible and can therefore easily be used for 99 per cent of all browsers.

Moreover, online criminals harm businesses by fraud such as phishing. ChosenSecurity's Client Certificates help companies communicate with their clients, partners and providers reliably, providing trusted authentication and supporting the encryption of transactions and data as well as secure access to applications and information.

"With our new office, we will be able to serve our local customers on the spot," said Neal Creighton, Chief Executive at ChosenSecurity. "The local approach in combination with the highly reliable German security software and services from TC TrustCenter will help us to deliver our UK-based customers a broad and well-established set of real-world solutions."
